

Managing projects

Each Semmle project defines a code base to build and index ready for Semmle analysis. For more detailed information about projects, see [Project](#).

The most common project tasks are:

- [Changing the project name](#)
- [Configuring a project to use incremental builds](#)
- [Creating and using a credentials store](#)
- [Creating a new project](#)
- [Editing a project](#)
- [Including the snapshot source revision number](#)
- [Managing branches](#)
- [Using bootstrap to create a project](#)

Please see the [Reference](#) topics for reference information about commands and files.
